SUMMARY

Full-stack engineer with experience building and scaling **production SaaS products** end to end, from **event-driven backends** and third-party integrations to fast, maintainable **web frontends**. Owns problems across the stack, with a focus on **system design, reliability and performance**.

EXPERIENCE

OUTBOX LABS | **Founding Engineer** — Bengaluru, KA | Feb 2024 – Oct 2026

- Led engineering for **ColdMailReseller.com**, Zapmail's white-label B2B platform (1M+ mailboxes, 330K+ domains), through **roughly 50% month-over-month growth**, owning the **Node.js and PostgreSQL** backend and reseller partner onboarding onto the REST API
- Engineered **event-driven provisioning workflows** that deliver domains, DNS and Google Workspace / Microsoft 365 mailboxes in **about 40 minutes per order**, backed by queue health checks and deduplicated Slack and Sentry alerts
- Expanded reseller sales channels by launching **pre-warmed mailboxes** that are ready to send on day one, with **AI-generated profile photos** using Gemini and OpenAI
- Oversaw the design of **Clavis, an independent export microservice** that decouples failure-prone Playwright exports to **10+ cold-email platforms** from the core API through **Kafka messaging**, improving fault isolation
- Built **DomainStack** end to end, integrating **5+ domain registrars**, including Namecheap, GoDaddy and Spaceship, behind a **pluggable registrar abstraction** for multi-TLD domain search, checkout and DNS management
- Built **ReferralStack**, an affiliate platform tracking **hundreds of thousands of dollars in affiliate revenue**, with an embeddable JavaScript attribution SDK, **ClickHouse** analytics and automated Stripe payouts
- Designed the **company-wide frontend architecture** as a shared starter kit, now the standard for every product's web app and landing pages, and **cut page load time by 50%** on **ReachInbox.ai** and **MailVerify.ai** through code splitting, lazy loading and SSR

OPENINAPP | **Frontend Developer** — Bengaluru, KA | Sep 2023 – Jan 2024

- Shipped **4 creator-monetization features** (YTCash, Barter Box, Captions, Dub This) in **Next.js**, on a modular frontend architecture that made new features faster to integrate
- Optimised **smart-link redirection** with **server-side rendering** so links open directly in native mobile apps instead of the browser

SKILLS

Languages: TypeScript, JavaScript (ES6+), Java, SQL
Backend: Node.js, Express.js, GraphQL, Kafka, BullMQ, REST APIs, Webhooks
Frontend: React.js, Next.js, TanStack Query, Tailwind CSS
Databases & Tools: PostgreSQL, MongoDB, Redis, ClickHouse, Elasticsearch, Docker, GitHub Actions (CI/CD), Git
Integrations & AI: Stripe, Playwright, Sentry, OpenAI, Gemini

EDUCATION

JSS ACADEMY OF TECHNICAL EDUCATION — Bengaluru, Karnataka | 2023
B.E. in Computer Science & Engineering — CGPA: 8.21
